

REVOLUTION

BY PHOENIX

Committed to Life

We are dedicated to protecting the planet's natural resources by creating sustainable consumer goods, leading the change with each product.

With no second planet, we must respect the environment through our products, processes, and operations to preserve the only planet we have - our life, our future.

A close-up photograph of a beige, speckled plastic corner piece, likely from a child's playset. The piece has rounded edges and is set against a similar speckled background. Faintly embossed on the surface are several small icons: a triangle, a circle, a square, and a rectangle, arranged in a row. The text is positioned in the upper right corner of the image.

We are the change, the transformation,
and we're committed to inspiring our
future generations. On this journey,
our focus will be on #three main
areas.

Creating a
Positive
Impact

#1 Recycling, circularity & closing the loop.

We are passionate about recycling,
and our mission is to grow our
business by eventually using
only recycled materials.

We are committed to ensuring that our products don't put any extra strain on our environment, and we're constantly working on developing new materials that have a lower CO2 footprint.

#2 Reducing our climate footprint.

A lush green forest with a waterfall cascading over mossy rocks. The scene is filled with dense foliage, including large green leaves and bamboo-like plants. The waterfall is a bright white stream of water falling into a pool at the bottom, surrounded by dark, moss-covered rocks.

#3 Protecting biodiversity.

The world's ecosystems are based on healthy oceans and forests, and if that part of the planet becomes dysfunctional, all of life on this planet will suffer. We are driven to do our part in keeping our planet safe and free of single use plastic and other harmful objects, one small step at a time.

Material

TEA BASE COMPOSITE (TBC)

Sustainability and innovation drive our choice of materials and processes, aligning with our mission to protect the environment. We have developed a new generation of composites using our proprietary technology. Sri Lanka, our island home, is known for its vast jungles, mountains, and one of the largest tea industries in the world. This Industry generates significant tea debris, which possesses valuable mechanical properties for our products. By incorporating tea debris, we reduce the use of virgin plastic resin in our products while also helping to mitigate tea waste.

Our tea-based products are available in three rich, natural shades: Beige Tea, Greige Tea, and Brown Tea.
